

TEXT TO SPEECH

Go contact

The Text Recognition and Speech Synthesis solution that makes communication with your customers easy and effective.

The Speech Synthesis Systems allow you to reproduce a written text through speech. In essence, a speech synthesizer allows giving a voice to the computer.

What is it?

The use of recognition and speech synthesis engines allows you to create more natural and intuitive voice solutions.

The automatic generation of speech from text, or speech synthesis, as it is commonly known, is a process that turns any text into speech with high levels of intelligibility and naturalness. The results obtained are used later on in the process of generating the speech signal.

Main features

- Creation of simple and intuitive solutions using speech instead of text messages
- Scalability capacity

Sceneries of Use

- Phone collection services
- Delivery notices for customer orders
- Disclosure of new products/services

• Speech Synthesis System

- Ability to customize the voice depending on the specific needs (branding)
- Ability to reuse previously recorded material to generate new voices
- Ability to add new pronunciations to all words
